The following two letters used as part of the number designating technical reports of research published under the Wetlands Research Program identify the area under which the report was prepared:

	<u>Task</u>		<u>Task</u>
CP	Critical Processes	RE	Restoration & Establishment
DE	Delineation & Evaluation	SM	Stewardship & Management

Destroy this report when no longer needed. Do not return it
to the originator.

The findings in this report are not to be construed as an
official Department of the Army position unless so
designated by other authorized documents.

The contents of this report are not to be used for
advertising, publication, or promotional purposes.
Citation of vendors does not constitute an official
endorsement or approval of the vendor, nor does
the Government guarantee or endorse vendors'
products or services.

Wetland Vegetation

Directory of Wetland Plant Vendors (TR WRP-SM-1)

ISSUE:

Acquisition of wetland plant materials is often limited by knowledge of wetland plant vendor locations and the materials they supply. Government, commercial, and private interests often need large quantities of selected plant species from ecological regions similar to locations of wetland projects. Local vendors may not necessarily supply the species of interest, and the species may not be available in the volumes required. No systematic national-level listing of wetland plant vendors (along with the plant species they routinely supply) has been developed to help locate regional supplies of target wetland species.

RESEARCH:

The Directory of Wetland Plant Vendors provides a national listing of vendors indexed by wetland plant species. It was developed by U.S. Department of Agriculture Soil Conservation Service (SCS) personnel with funding and assistance provided by the U.S. Army Engineer Waterways Experiment Station (WES). A thorough search was made to identify commercial sources of wetland plants in the United States. The inclusion of any vendor does not indicate endorsement by the SCS or WES. The SCS and WES do not guarantee availability or quality of plant materials produced by any vendor.

SUMMARY:

The directory will facilitate the location of wetland plant sources nationwide. The directory provides the following:

- A list of wetland plant vendors and addresses by state.
- A list of obligate and facultative wetland plant species on the "National List of Plant Species That Occur in Wetlands: 1988 National Summary" (U.S. Department of the Interior Biological Report 88(24), September 1988).
- Wholesale and retail vendors that supply each species.
- The propagule types (seed and/or vegetative propagule) that are routinely available.

AVAILABILITY OF REPORT:

The directory is available on Interlibrary Loan Service from the WES Library, telephone (601) 634-2355.

To purchase a copy, call the National Technical Information Service (NTIS) at (703) 487-4650. For help in identifying a title for sale, call (703) 487-4780.

NTIS report numbers may also be requested from the WES librarians.

About the Authors:

The Directory was developed by personnel at the SCS Jamie L. Whitten Plant Materials Center, Coffeeville, MS, in cooperation with the WES Environmental Laboratory. Point of contact at the Jamie L. Whitten Plant Materials Center is B. B. Billingsley, Jr., at (601) 675-2588. Points of contact at the WES Environmental Laboratory are Dr. Mary Davis at (601) 634-2833 and Mr. Hollis Allen at (601) 634-3845.

Preface

The work described in the report was sponsored by the Headquarters, U.S. Army Corps of Engineers (HQUSACE), as part of the Stewardship and Management Task Area. The work was performed as part of Work Unit 32765, Technology for Managing Wetlands, and was monitored by the U.S. Army Engineer Waterways Experiment Station (WES), Environmental Laboratory. Mr. Chester Martin of the Stewardship Branch, WES, was Principal Investigator. Mr. Joe Wilson, HQUSACE, was the WRP Technical Monitor for this work.

Mr. Jesse A. Pfeiffer, Jr., was the WRP Coordinator at the Directorate of Research and Development, HQUSACE, and Mr. William L. Klesch served as the WRP Technical Monitors' Representative. Dr. Russell F. Theriot, WES, was Program Manager of the WRP, and Mr. James Teaford was the Task Area Manager.

The report was prepared by personnel of the U.S. Department of Agriculture, Soil Conservation Service (SCS), Jamie L. Whitten Plant Materials Center, Coffeeville, MS. This report was prepared under Interagency Agreement Debtor No. 932800180 between the SCS and the WES.

The work was designed by and conducted under the technical supervision of Mr. Hollis Allen and Dr. Mary Davis, WRP Research Area Investigators; under the direct supervision of Mr. E. Carl Brown, Chief, Wetlands Branch; and under the general supervision of Dr. Conrad J. Kirby, Jr., Chief, Ecological Research Division, and Dr. John Harrison, Director, EL.

At the time of publication of this report, Director of WES was Dr. Robert W. Whalin. Commander was COL Leonard G. Hassell, EN.

PRINTED ON RECYCLED PAPER

Introduction

This **Directory of Wetland Plant Vendors** was compiled to provide a national listing of vendors indexed by wetland plant species. The directory will assist individuals involved in wetland habitat development and maintenance or others with a need for wetland plants. The directory was developed by U.S. Department of Agriculture Soil Conservation Service (SCS) personnel, with funding and assistance provided by the U.S. Army Engineer Waterways Experiment Station (WES). A thorough search was made to identify commercial sources of wetland plants in the United States. The inclusion of any vendor does not indicate endorsement by the SCS or the WES. The SCS and the WES do not guarantee availability or quality of plant materials produced by any vendor, nor is the inclusion of any vendor to be considered as an endorsement by the Government.

Chapter 1 of this directory lists the vendors of wetland plants alphabetically by states, and numerically within states under "code." Codes ending with "W" are known wholesale dealers, who may not be willing to provide plant materials to individuals purchasing small quantities. An "X" designates dealers not presently producing wetland plants but who expressed an interest in doing so upon request or if demand becomes sufficient. Those codes with no letter suffix are retail dealers.

Chapter 2 lists the wetland plants by species. This list of species was drawn from the **National List of Plant Species That Occur in Wetlands: 1988 National Summary**, U.S. Department of the Interior Biological Report 88(24), September 1988. Only those species in the obligate wetland or facultative wetland indicator categories of this report were included in this directory. The plant nomenclature follows the **National List of Scientific Names**, U.S. Department of Agriculture publication SCS-TP-159, January 1982. The list contains some naturally occurring hybrid species that are designated by a genus name followed by an "X" and the species name, e.g., *Typha x glauca*. Those species with a "var." (botanical variety) or "ssp." designation indicate that these forms are to be used in a wetland habitat because of their increased tolerance to wet sites. For example, *Acer rubrum* var. *tribolum* (trident red maple) is more adapted to conditions of high soil moisture than *Acer rubrum*. Those interested in purchasing these plants for wetland use should contact the dealer to confirm the availability of that subspecies or variety. The common names listed are those most widely accepted for that species, although other names may be used.

Those species with no common name listed have no generally accepted common name. The species are referenced by "code" to the vendors listed in Chapter 1. Codes end in one of three letters, indicating the type of propagules available from that vendor (p = plants or vegetative propagules, s = seed, and b = both seed and vegetative propagules). Plants purchased should originate from the same geographical region in which they will be planted, whenever possible. Emphasis was placed on locating vendors for native or naturalized wetland plants. Some plants grown strictly for ornamental purposes or as novelties were omitted. Also omitted were commonly available species, e.g., *Festuca arundinacea* (tall fescue), because of the large number of potential vendors. Before considering purchase of wetland plants, especially if they are to come from a vendor outside the geographical region, consultation with a wetlands vegetation specialist is strongly recommended.

All Soil Conservation Service and Waterways Experiment Station programs and services are offered on a nondiscriminatory basis without regard to race, color, national origin, religion, sex, age, marital status, or handicap.

13. ABSTRACT (Maximum 200 words) Acquisition of wetland plant materials is often limited by knowledge of wetland plant vendor locations and the materials they supply. Government, industrial, and private interests need large quantities of selected plant species from ecological regions similar to locations of wetland projects. Local vendors do not necessarily supply the species of interest, and the species may not be available in the volumes required. No systematic listing of wetland plant vendors (along with the plant species they routinely supply) has been developed to help locate regional supplies of target wetland species. The Directory of Wetland Plant Vendors was compiled to provide a national listing of commercial vendors indexed by wetland plant species. The directory provides a list of wetland vendors and addresses by state, a list of obligate and facultative wetland plant species on the "National List of Plant Species That Occur in Wetlands: 1988 National Summary," wholesale and retail vendors that supply each species, and the propagule types (seed and/or vegetative propagule) that are routinely available.
